

330 JOINTS-LONGITUDINAL JOINTS.
(REV7-17-06) (FA 7-20-06) (1-07)

SUBARTICLE 330-11.2 (Page 254) is deleted and the following substituted:

330-11.2 Longitudinal Joints: For all layers of pavement except the leveling course, place each layer so that longitudinal construction joints are offset 6 to 12 inches laterally between successive layers. Plan offsets in advance so that longitudinal joints of the friction course are not in wheel path areas. The Engineer may waive this requirement where offsetting is not feasible due to the sequence of construction.
