

SECTION 617 - SOIL CONDITIONERS

Reserved

SECTION 618 - SEEDING

618.01 Description This work shall consist of furnishing and applying a seed, and other materials to areas shown on the plans or as authorized by the Resident.

- a. Seeding Method Number 1 shall consist of the application of “Park Mixture”, fertilizer, and cellulose fiber mulch to loamed areas which are expected to be maintained by frequent mowing: i.e. private lawns.
- b. Seeding Method Number 2 shall consist of the application of “Roadside Mixture Number 2”, lime, and fertilizer to existing soils or loamed areas which are expected to be maintained by infrequent mowing: i.e. inslopes, ditches, and rural lawns.
- c. Seeding Method Number 3 shall consist of the application of “Roadside Mixture Number 3,” inoculant and lime to existing soils, erosion control mix, or riprap areas which are not expected to be mowed: i.e. backslopes, guardrail areas.
- d. Special Seeding shall consist of the application of a special seed mix and amendments as defined by Special Provision.
- e. Temporary Seeding shall consist of the application of seed to control erosion to slopes and stockpiles that have been disturbed during construction and will be left incomplete for more than 30 days. Seed for Temporary Seeding shall be oats, wheat, rye, or other seed conforming to the requirements of Section 717.03(e).
- f. Crown Vetch Seeding shall consist of the application of seed, inoculant, and lime to areas that will not be mowed: i.e. riprap or erosion control mix.

618.02 Materials Materials shall meet the requirements of the following Sections of Division 700 - Materials:
